

Natural Gas Utility Adopts Modern Test Management with SpiraTeam from Inflectra

SpiraTeam implemented to automate testing processes and improve help desk ticketing

Industry

Energy & Industrial

Objective

Implement a centralized test management system to replace legacy Micro Focus tools and lay the groundwork for test automation.

Approach

Looking for a software platform that could automate the management of testing activities.

Solution at a Glance

Products Used:

- SpiraTeam
- RemoteLaunch

Features Used:

- Requirements Management
- Release Management
- Defect Tracking
- Help Desk Ticketing
- Test Management
- Document Management
- Automated Testing

Scale of Implementation:

- ~ 30 projects
- ~ 50 users

“The Inflectra products (SpiraTeam) has a very good relationship of price and functions. We are able to review our projects and can configure all things that we need.”

– Florian Garbe, IT-Infrastructure & Application Management

Implementation of a good test management for their software products in general

The large German Natural Gas Utility had no test management tool for most projects. After using HP-ALM on one project, they instead decided to use Inflectra products. The deciding factors were: reliability, the ability to self-configure the system, and the value for money of the products.
