Rapise – Rapid & Flexible Automated Testing

Rapise® provides powerful and easy to use automated testing. When you need to test web, mobile or desktop applications or test your APIs and web services, Rapise makes it easy. Ideal for today’s agile software projects.

Rapise is accelerates your manual and automated testing – for all types of applications. With powerful exploratory, cross-browser and data-driven testing, Rapise is fully extensible, with third-party library support.

Key Features Include:

- **Web, Mobile & Desktop Testing in One Tool**
  Rapise comes out of the box with support for testing Desktop, Mobile and Web Applications. It allows the same test scripts to be executed in multiple browsers unchanged and supports most GUI frameworks.

- **Learn and Go Testing™**
  Rapise’s Learn and Go testing is much more efficient than traditional record & playback. Objects are edited during the learning process instead of at the end. Significantly reduces testing time and gets your application to market faster.

- **Extensible Platform for Test Automation**
  Rapise's open architecture provides unlimited flexibility to extend the system to meet the unique testing needs of your software applications.

Graphic User Interface (GUI) Testing

Rapise® provides powerful built-in support for the following GUI platforms: Java, Windows Forms including Infragistics, DevExpress, Telerik, ComponentOne, SyncFusion, Adobe Flash/Flex including AIR, Microsoft .NET, Visual Basic 6, Win32, Silverlight, and WPF.

With Rapise you can use the same environment to test all these different technologies and platforms.

Mobile Device Testing

Rapise lets you record and play automated tests on a variety of mobile devices using either Apple iOS or Android. Rapise gives you the flexibility to test your applications on either real or simulated devices.

Cross-Browser Testing

Rapise’s cross-browser testing capabilities are best in class, with support for multiple versions of Microsoft Internet Explorer, Mozilla Firefox and Google Chrome. Choose Rapise to test web applications in all of the most widely used browsers.

Rapise lets you record and play automated tests on real iOS devices (iPad and iPhone) as well as test applications using the iOS simulator. Rapise lets you record and play automated tests on real Android devices as well as test applications using the Android simulator.

Record or create one test script and execute the same script without modification across the major browsers. Rapise comes with built-in support for the Google Web Toolkit (GWT), jQuery and Yahoo User Interface (YUI) web application frameworks.
Web Service & API Testing
A web service is a unit of managed code that can be remotely invoked using web protocols. This allows you to share your application’s functionality with other programs.
Rapise comes with built-in support for testing RESTful web services using a variety of formats including XML and JSON. Rapise’s query builder streamlines the testing of your APIs with robust debugging and message tracing.

Data-Driven Testing
Data-driven testing is the creation of test scripts to run together with their related data in a framework. The framework provides re-usable test logic to reduce maintenance and improve test coverage.
Rapise provides strong support for data-driven testing with the ability to load in test data from an Excel spreadsheet or relational database.

Integration with SpiraTest
SpiraTest provides an integrated, holistic test management solution that manages your requirements, tests and incidents. When you use Rapise with SpiraTest, you can centrally manage your automated tests and remotely schedule and launch them in a globally distributed test lab.

You can record and create your test cases using Rapise, upload them to SpiraTest and then schedule the tests to be automatically executed on multiple remote computers.

Manual & Exploratory Testing
In addition to its world class automation functionality, Rapise brings the power of automation to your manual and exploratory testing. No more laborious creation of test cases and test steps. Rapise, lets your testing keep pace with your development cycles by automatically creating the test cases as you simply use the application:
