KEY SUMMARY QUESTIONS

Where Have They Been Successful?

We are most successful with medium-to-large enterprises that develop, manage, or deploy software or software-enabled systems. Our ideal customer works in a highly regulated industry like life sciences, banking, insurance, automotive, defense, aerospace, or manufacturing and needs end to end traceability of their processes, high-end quality assurance, and the need to scale their business.

What Is The Revenue Impact To AWS?

Our average initial customer Annual Contract Value (ACV) is approximately \$20k and customers have an average lifespan of 6 years, giving an average Lifetime Value (LTV) of ~\$120k. With our expanding portfolio of products, upsell and cross sell opportunities could yield an ACV of \$50k and a corresponding LTV of \$300k.

4

DIFFERENTIATORS

We offer an integrated alternative that lets cross-functional teams (developers, managers and testers) all work from the same 'single pane of glass'. Our platform unparalleled support for regulated industries that need compliance, traceability and auditability yet want to be agile and able to embrace innovation at the same time. Our platform lets customers seamlessly integrate multiple tools so different teams can use what they like but with better efficiency and oversight.

Similar Solutions

1. Support for multiple methodologies (Scrum, Kanban, Agile, SAFe, waterfall) in the same platform that can all roll-up into an integrated program view.
2. Out of the box functionality that covers entire lifecycle vs. relying on plugins
3. End-to-end traceability, from risks to requirements to test cases to code. The design includes default workflows and best practices baked in.

Related AWS Products & Services

1. Our platform provides DevOps planning, testing and development functionality that complements AWS CodeBuild & CodePipeline.
2. Out platform provides AI-driven automated software testing that leverages AWS Device Farm and lets testers create and run automated tests on the devices without needing to manual write code or create test scripts.
